Sudharshan Reddyam

Full Stack Engineering Leader | Frontend (React/TypeScript/Angular) & Team Management

Frisco, Dallas Area, Texas | +443-316-77151 | sudharshan.ui@gmail.com | linkedin.com/in/sudharshanredyam

PROFESSIONAL SUMMARY

Full Stack Engineering Leader with 13+ years of experience designing, building, and scaling web platforms across frontend, backend, and cloud layers. Proven hands-on leadership experience directing a frontend development team of 8 engineers (Walmart) and mentoring engineers across multiple organizations, while remaining an active individual contributor in architecture, code, and delivery. Deep expertise in TypeScript, React, Angular, and NgRx/Redux Toolkit on the frontend, paired with Node.js, Java Spring Boot, and Java Micronaut backend systems, RESTful/GraphQL APIs, and event-driven, real-time architectures (Kafka, SQS, Artemis, WebSocket, RabbitMQ) that connect user-facing applications to distributed and third-party systems. Enforces delivery quality through policy-as-code governance (OPA), automated end-to-end coverage (Playwright), and full-stack observability (OpenTelemetry, Grafana, Datadog, Splunk), while defining code-quality and review standards for AI-assisted development using GitHub Copilot and MCP-based tooling. Skilled at translating deep technical complexity into reliable, intuitive tools, partnering closely with product, backend, and infrastructure teams, driving the full software development lifecycle in Agile/Scrum environments, and building a culture of ownership, fast iteration, and high accountability.

CORE COMPETENCIES

Engineering Team Leadership & Mentoring • Frontend Architecture (React, TypeScript, Angular) • Full Stack Development (Node.js, Java Spring Boot, Micronaut) • Event-Driven & Real-Time Systems (Kafka, SQS, Artemis) • Policy-as-Code Governance (OPA) • Observability & Distributed Tracing (OpenTelemetry, Grafana, Datadog, Splunk) • Automated Testing & Coverage Enforcement (Playwright, Jest, Cypress) • AI-Assisted Engineering & Code Review Standards (GitHub Copilot, MCP) • Cross-Functional & Multidisciplinary Collaboration • Agile/Scrum Delivery & SDLC Ownership • Cloud Infrastructure (AWS EKS) • Stakeholder Communication • Hands-On Technical Contribution

TECHNICAL SKILLS

- Frontend: JavaScript, TypeScript, React, Angular 19, HTML5, CSS3, Tailwind CSS, SCSS, Bootstrap, Material UI, RxJS, NgRx, Redux Toolkit
- Backend: Node.js, Express.js, NestJS, Java, Spring Boot, Micronaut, RESTful APIs, GraphQL, Apollo WebClient, Microservices Architecture
- Event-Driven & Messaging: Kafka, Amazon SQS, Apache Artemis, Salesforce Platform Events, WebSocket, RabbitMQ
- Databases: MongoDB, MySQL, SQL
- Cloud & DevOps: AWS (EKS, S3, Lambda, EC2, CloudFront, API Gateway, CloudWatch, DynamoDB), Firebase, Docker, Kubernetes, Jenkins, CI/CD, Groovy
- Policy-as-Code & Governance: OPA (Open Policy Agent), Conftest, CI/CD policy gates, code-quality and coverage enforcement
- Observability: OpenTelemetry, Grafana, Datadog, Splunk, distributed tracing, real-time monitoring dashboards
- Testing & Quality: Playwright (end-to-end), Jest, Cypress, Unit/Integration Testing, TDD/BDD, Code Reviews
- AI-Assisted Engineering: GitHub Copilot, MCP (Model Context Protocol) tooling, review/verification standards for AI-generated code
- Development Tools: NX Monorepo, Webpack, Git, JIRA, Postman, Swagger
- Methodologies: Agile, Scrum, Clean Code Practices, WCAG Accessibility Compliance

PROFESSIONAL EXPERIENCE

Full Stack Engineer (Technical Lead Contributor) **Oct 2023 – Present**

Fidelity Investments | Frisco, Texas

- Serve as a hands-on technical lead on enterprise-level applications, architecting solutions in Angular 19 and NX monorepo architecture while guiding frontend standards for the team

- Architect an event-driven ingestion pipeline on Java Micronaut services running on AWS EKS: external events from Salesforce, Amazon SQS, Apache Artemis, and Kafka are consumed, forwarded through internal queues to downstream Micronaut services, and persisted through a CRUD API layer
- Design and implement GraphQL APIs for efficient data fetching and partner integrations, working cross-functionally with backend and partner engineering teams
- Enforce policy-as-code (OPA) checks in delivery pipelines and build end-to-end UI test coverage with Playwright, turning manual review gates into automated, enforced standards
- Instrument services with OpenTelemetry and build distributed-tracing and performance dashboards in Grafana, Datadog, and Splunk for real-time production observability
- Define code-quality and governance gates — including review and automated-coverage standards for AI-assisted code generated with GitHub Copilot and MCP-based tooling — to keep delivery quality consistent as the team scales agentic coding tool usage
- Build and maintain CI/CD pipelines using Jenkins with Groovy scripting to drive reliable, automated deployments across the SDLC
- Collaborate with cross-functional teams of product, backend, and platform engineers to deliver high-quality financial technology solutions on schedule

Environment: Angular 19, NX Monorepo, Tailwind CSS, RxJS, Apollo WebClient, Webpack, Java, Micronaut, Spring Boot, NestJS, GraphQL, AWS EKS, Kafka, SQS, Artemis, OPA, Playwright, OpenTelemetry, Grafana, Datadog, Splunk, Jenkins, Groovy, GitHub Copilot, MCP

Senior Software Engineer – Full Stack (Angular/Java) **Apr 2023 – Sep 2023**

American Tire Distributors | Charlotte, NC

- Led development of scalable, performant web applications using Angular 14+ with a Java Spring Boot backend, owning architecture decisions end to end
- Partnered with cross-functional teams to gather requirements, design UI/UX components, and implement RESTful APIs
- Drove comprehensive unit testing (Jest for frontend, JUnit for backend) to raise code quality and reduce production defects
- Enforced clean code practices (SOLID, DRY, YAGNI) across Angular and Java Spring Boot codebases through code reviews and mentoring
- Actively participated in Agile/Scrum ceremonies including sprint planning, daily stand-ups, and retrospectives

Environment: Angular 14+, Java, Spring Boot, RESTful APIs, JWT, Tailwind CSS, Cypress, Jest, JUnit, AWS S3, CloudFront

Senior Software Engineer – MEAN Stack **Oct 2020 – Mar 2023**

Google | Flow Maker Project

- Developed and maintained enterprise-scale web applications using Angular 14+, TypeScript, and modern frontend frameworks
- Implemented NgRx state management for efficient component communication and data flow across a large application
- Designed and built microservices architecture using Node.js and Express.js, containerized with Docker and Kubernetes
- Implemented event-driven architecture using RabbitMQ for asynchronous communication between microservices
- Integrated monitoring and logging (Prometheus, ELK Stack) for system observability; partnered with DevOps to establish CI/CD pipelines and high-availability systems

Environment: Angular 14+, RxJS, NgRx, Node.js, Express.js, TypeScript, JWT, RESTful APIs, Microservices, Docker, Kubernetes, RabbitMQ, Kafka, Jenkins, Splunk, AWS (EC2, S3, Lambda, API Gateway, CloudWatch, DynamoDB)

Senior Software Engineer **Oct 2019 – Sep 2020**

Google | BizApps Project

- Developed and maintained complex web applications using Angular and TypeScript, focused on performance optimization
- Designed microservices architecture using Node.js and Express.js to improve application modularity and scalability
- Configured AWS API Gateway and Lambda functions for serverless computing and efficient request handling
- Collaborated with cross-functional teams in an Agile environment to ensure quality deliverables and on-time project completion

Environment: Angular, TypeScript, NgRx, Node.js, Express.js, RESTful APIs, Microservices, AWS (EC2, S3, Lambda, API Gateway, CloudWatch, DynamoDB)

Senior Software Engineer **Dec 2018 – Sep 2019**

Ericsson MediaKind | TV Platforms & Media Project

- Contributed as an individual technical contributor across full stack development for entertainment and media platform applications
- Implemented Single Sign-On (SSO) authentication using JWT for secure user access management
- Addressed critical security vulnerabilities (CSRF, XSS, DOS prevention) and implemented WCAG accessibility compliance features

Environment: TypeScript, ES6, jQuery, Backbone.js, Node.js, HTML5, CSS3, Sass, QUnit, Sinon, Karma

Senior Software Engineer **Nov 2016 – Nov 2018**

bwin.com

- Architected integration patterns for a casino gaming platform, successfully integrating multiple third-party games into the host platform
- Established secure cross-domain communication protocols and improved performance using persistent WebSocket connections
- Led technical communication with development teams and guided them through complex implementation challenges

Environment: HTML5, JavaScript, jQuery, Node.js, AngularJS, Bootstrap, CSS3

Senior Software Engineer – Lead Developer **Jan 2017 – Sep 2017**

pobyt.co

- Architected and developed a complete mobile application for a hotel booking platform from inception to release
- Integrated social authentication (Facebook, Google), Google Maps API, push notifications (OneSignal), and multiple payment gateways (Razor Pay, Paytm)
- Established Git webhooks for continuous integration and automated deployment

Environment: Ionic2, TypeScript, Angular 2, SCSS, Google Maps API, Firebase, OneSignal, Git

Software Engineer **Jan 2016 – Sep 2016**

Cambridge University

- Designed and developed automation tool architecture using PHP for educational content generation
- Created 13 foundational templates powering automated SCORM package generation, cutting deployment time to 6 months

Environment: HTML5, CSS3, JSON, jQuery, XML, PHP

Software Engineer **Jul 2015 – Sep 2015**

Allergan

- Developed a cross-platform mobile application framework using jQuery and HTML5, deployed via PhoneGap/Cordova for iOS and Android

Environment: HTML5, CSS3, JSON, jQuery, PhoneGap (Cordova)

Project Lead **Apr 2012 – Sep 2015**

Walmart | E-Survey Platform

- Led a frontend development team of 8 engineers, owning sprint priorities, resource allocation, and delivery quality for an e-survey platform
- Developed surveys on the Dimensions platform to support business intelligence and customer insights
- Implemented CI/CD processes for automated testing and deployment across multiple environments
- Managed end-to-end project delivery, ensuring quality standards and client satisfaction across releases

Environment: HTML5, CSS3, JSON, jQuery, Dimensions

CERTIFICATIONS

- Graph Developer – Associate
- Architecting with Google Compute Engine
- Oracle Certified Java Professional

EDUCATION

Bachelor of Technology

Jawaharlal Nehru Technological University | 2011
